High-piled combustible storage is found in every community, and in many different occupancy classifications. This presentation will focus on high-piled combustible storage permit requirements, fire plan review of racking, fire sprinkler protection requirements for racking, and inspection of high-piled combustible storage. Photos and video of high-piled combustible storage will help illustrate the need for fire code compliance, and some forms will be distributed for you to consider within your own agency.

This workshop will benefit building officials, building inspectors, permit professionals, fire marshals, fire inspectors, firefighters, building owners/managers, general contractors, and design professionals.

Presenter: Michael Fitzgerald is a 19-year veteran of the fire service, having begun in public safety as a paramedic in 1989. As the fire marshal for Monroe, his jurisdiction has a lot of high-piled combustible storage occupancies from grocery stores to complex warehouses, and has found that the code requirements for high-piled combustible storage are often overlooked by racking vendors and installers. Mike has degrees in fire command administration and paramedicine, and is currently a graduate student studying public administration. He is a long-time board member of the Snohomish County Fire Prevention Association, serves as president of the Northwest Washington Chapter of the International Code Council and is a Certified Fire Protection Specialist.

Location: Everett Fire Fighters Association Hall
2411 Hewitt Avenue - Everett WA 98201
